PUNISHER 700 R4 - Let the punishing begin!

HORSEPOWER RANGE: 550hp

The Punisher transmission comes with a Mad Dog reprogramming update kit, Mad Dog shift kit, and Raybestos 9 clutches (replaces factory 5 clutches in the 3-4 drum) the 9 clutch pack also has specialized heat treated steels that with stand much more heat, all Raybestos high temp high energy clutches through out the rest of the unit, all new steels, bands, bushings, and ring. A .500 boost valve, 10 vane pump rotor, 4140 hardened pump rings, TEFLON pump bushing, a 29 element sprag, Sonnax WideOpenThrottle valve, Over sized hardened sun gear shell (which is three times thicker than factory, hardened input shaft N drum, (which has also been cold freezed to with stand much more abuse), high temp pro series Raybestos, kevlar bands and a billet servo (the billet servo has 30% more holding power, to give you that full throttle shift with out burning up the band. We discard the springs in the accumulators, because they always break and create problems. One two, and three four accumulators are blocked off to give you a nice solid shift ever time. Remember the transmission is only as good as the re-builder. This transmission is also excellent for pulling and towing.

NOTE: Let us know what type of shift you want. We can custom build each valve body for your application. Stage 1 is a factory shift, stage 2 is above factory it has a nice crisp shift and at wide open throttle it will sit you in the seat, and stage 3 is for that Saturday night special. Be warned stage 3 shift is very violent "Neck Brace Not INcluded"! If YOU got THE HORSEPOWER we have the transmission.

\$915- Standalone Transmission, 2x wheel drive

\$1015- Standalone Transmission, 4x wheel drive

\$1195-Transmission, Torque Converter, Cooler, Core, and Shipping
